MAKING DRUPAL DANCE

TECHNIQUES FOR NON-OBJVIOUS THEME MANIPULATIONS

BOSTON

JUNE 14, 2009

PRESENTOR

JOHN ALBIN WILKINS (JOHNALBIN)

Secondary Links stink

- * A Theme's Primary and Secondary links

or

- * Block containing Menu tree

Menu Block module, ftw

- * http://drupal.org/project/menu_block
- * Multiple blocks for placement
- * Highly configurable: slice & dice your menu tree

The Drupal 6 Two Step

- * MODIFY YOUR VARIABLES:

THEME_preprocess_HOOK(&\$vars)

- * SLIGHTLY REARRANGE YOUR VARIABLES:

HOOK.tpl.php

Breaking up \$content

- * CCK can do it!
- * “Display fields” tab
[admin/content/node-type/\[TYPE\]/display](admin/content/node-type/[TYPE]/display)
- * “Exclude” checkbox: removes field from \$content,
but still renders the field

Understanding the hidden order oftpls

- * Which template gets rendered first?
- * How do we exploit the order of rendering to move variables around?
- * PHP's static variables.
